Contents

	<i>Preface</i>	<i>page</i> ix
1	Asset Returns	1
	1.1 Returns	1
	1.2 Behavior of financial return data	7
	1.3 Efficient markets hypothesis and statistical models for returns	16
	1.4 Tests related to efficient markets hypothesis	21
	1.5 Appendix: Q–Q plot and Jarque–Bera test	27
	1.6 Further reading and software implementation	29
	1.7 Exercises	30
2	Linear Time Series Models	33
	2.1 Stationarity	33
	2.2 Stationary ARMA models	36
	2.3 Nonstationary and long memory ARMA processes	53
	2.4 Model selection using ACF, PACF and EACF*	58
	2.5 Fitting ARMA models: MLE and LSE	62
	2.6 Model diagnostics: residual analysis	72
	2.7 Model identification based on information criteria	77
	2.8 Stochastic and deterministic trends	79
	2.9 Forecasting	87
	2.10 Appendix: Time series analysis in R	101
	2.11 Exercises	105
3	Heteroscedastic Volatility Models	109
	3.1 ARCH and GARCH models	110
	3.2 Estimation for GARCH models	125
	3.3 ARMA–GARCH models	143
	3.4 Extended GARCH models	144

3.5	Stochastic volatility models	155
3.6	Appendix: State space models*	160
3.7	Exercises	168
4	Multivariate Time Series Analysis	171
4.1	Stationarity and autocorrelation matrices	171
4.2	Vector autoregressive models	176
4.3	Cointegration	194
4.4	Exercises	209
5	Efficient Portfolios and Capital Asset Pricing Model	211
5.1	Efficient portfolios	211
5.2	Optimizing expected utility function	219
5.3	Capital asset pricing model	221
5.4	Validating CAPM	226
5.5	Empirical studies	234
5.6	Cross-sectional regression	239
5.7	Portfolio optimization without a risk-free asset	240
5.8	CAPM with unknowing risk-free rate	248
5.9	Complements	252
5.10	Exercises	254
6	Factor Pricing Models	257
6.1	Multifactor pricing models	257
6.2	Applications of multifactor models	262
6.3	Model validation with tradable factors	264
6.4	Macroeconomic variables as factors*	274
6.5	Selection of factors	274
6.6	Exercises	283
7	Portfolio Allocation and Risk Assessment	286
7.1	Risk assessment of large portfolios	286
7.2	Estimation of a large volatility matrix	297
7.3	Portfolio allocation with gross-exposure constraints	317
7.4	Portfolio selection and tracking	322
7.5	Empirical applications	325
7.6	Complements	328
7.7	Exercises	331
8	Consumption based CAPM	333
8.1	Utility optimization	333
8.2	Consumption-based CAPM	336
8.3	Mean-variance frontier*	342

8.4	Exercises	345
9	Present-value Models	346
9.1	Fundamental price	346
9.2	Rational bubbles	348
9.3	Time-varying expected returns	351
9.4	Empirical evidence	354
9.5	Linear regression under dependence	359
9.6	Exercises	365
	<i>References</i>	366
	<i>Author Index</i>	375
	<i>Subject Index</i>	378
